Digital Vector Document

Executive Summary
This document serves as the ground truth benchmark for PyMuPDF digital vector text and table extraction. It operates with zero OCR overhead and sub-50ms latency.

System Architecture
Component	Implementation	Latency Target	Status
Vector PDF Parser	PyMuPDF (fitz)	< 50ms	PASS
Vision Fallback	RapidOCR ONNX	< 300ms	READY
Cloud Vision API	Gemini Multimodal	< 1200ms	READY

Core Mathematical Formula
The Gaussian normal probability density function is defined as:

$$f(x) = \frac{1}{\sigma \sqrt{2\pi}} e^{-\frac{1}{2}\left(\frac{x-\mu}{\sigma}\right)^2}$$

Where μ is the mean and σ^2 is the variance.
